

## 合约功能

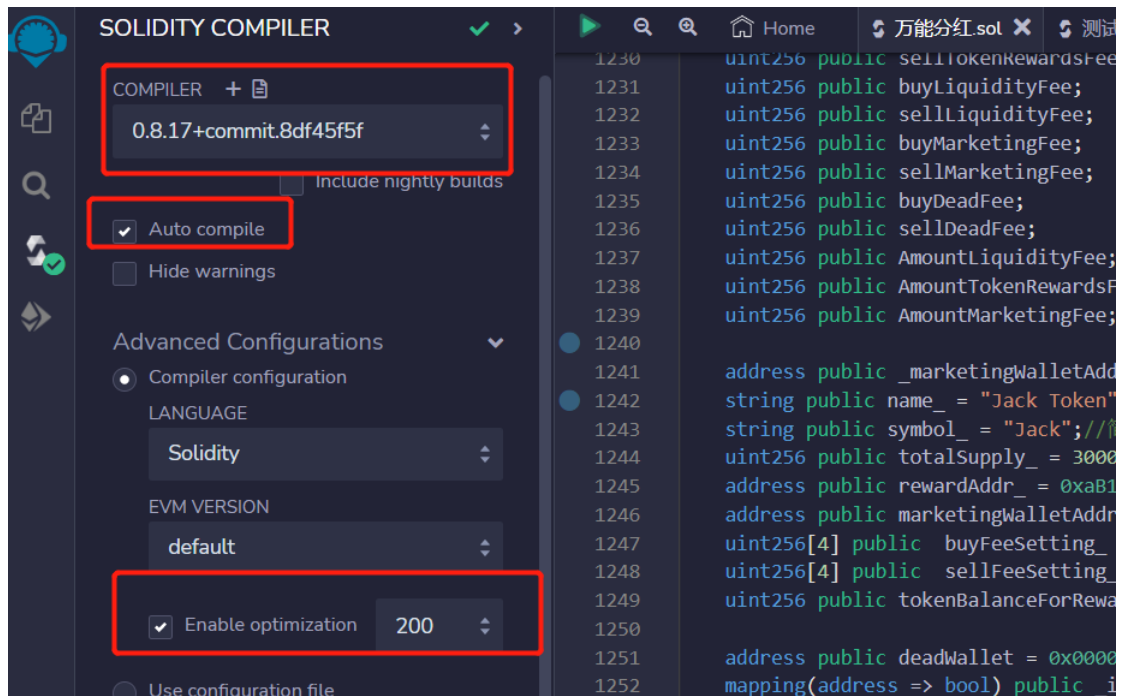

- 1、有黑名单与白名单
- 2、可以实现持币分其他币的功能
- 3、持币分红可以设置门槛
- 4、有营销钱包、销毁、加池功能
- 5、发币之后，可以调整买卖税率

## 一、代码参数

- `name_ = "Jack Token";`//名称
- `symbol_ = "Jack";`//简称
- `totalSupply_ = 300000;`//供应量 不用后面 18 位
- `rewardAddr_ = XXXXXXXX;`//分红币合约地址
- `marketingWalletAddr_ = XXXXXX;`//营销钱包地址
- `buyFeeSetting_ = [1,1,1,1];`//买入税：持币分红、回流、营销钱包、销毁
- `sellFeeSetting_ = [1,1,1,1];`//卖出税：持币分红、回流、营销钱包、销毁
- `tokenBalanceForReward_ = XXXX;`//持币门槛，后面+18 个 0

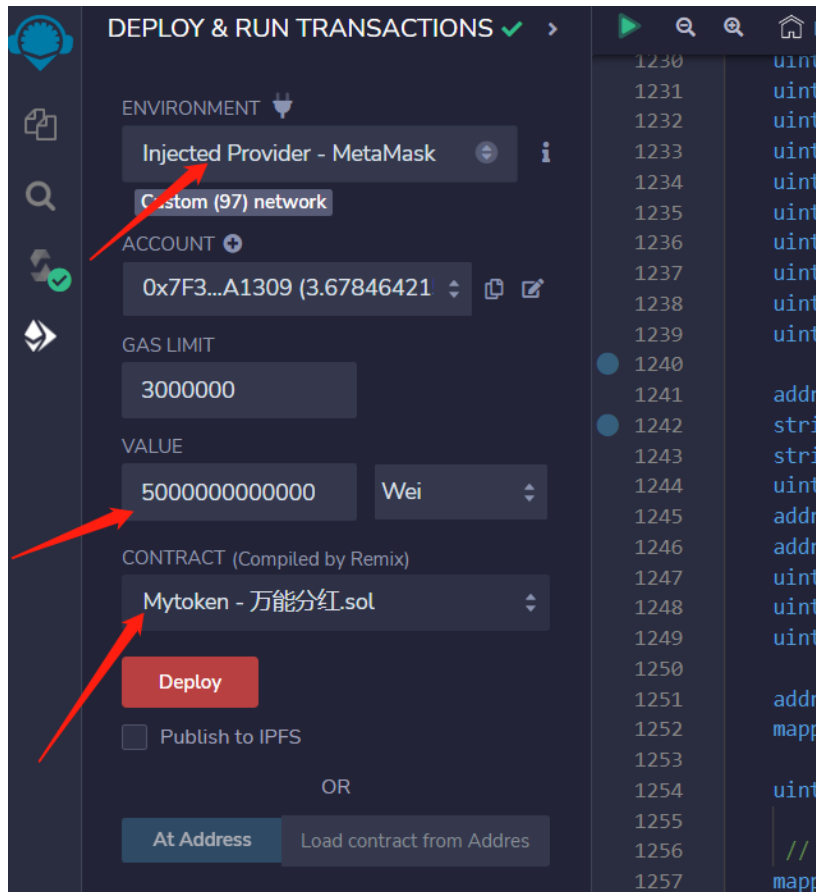

## 二、编译参数

- 版本号 COMPILER: `v0.8.17+commit.e28d00a7.js`
- Enable optimization: 开启并使用默认值 200

### 三、部署

- Environment: 选择第三个 Injected Provider Metamask
- Value: 50000000000000000 (5 后面 16 个 0)

## 四、开源

- 选择文件类型：solidity (Single file) 单文件
- 选择版本号：v0.8.17+commit.e28d00a7.js
- 选择开源许可证类型：No licernes

Please be informed that advanced settings (e.g. bytecodeHash: "none" or viaIR: "true") can be accessed via Solidity (Standard-Json-Input) verification method. More information can be found under Solidity's "Compiler Input and Output JSON Description" documentation section.

是否优化: yes

Contract Source Code

1. If the contract compiles correctly at REMIX, it should also compile correctly here.  
2. We have limited support for verifying contracts created by another contract and there is a timeout of up to 45 seconds for each contract compiled.  
3. For programatic contract verification, check out the [Contract API Endpoint](#)

Constructor Arguments ABI-encoded (for contracts that were created with constructor parameters)

## 五、修改合约

在权限没放弃的情况下，可以对合约进行一些修改

### 1、EnemyAddress 设置黑名单

Code
Read Contract
Write Contract

● Connect to Web3

1. EnemyAddress

account (address)

account (address) 地址

value (bool)

value (bool) 填true 拉黑, 填false 解除

Write

## 10、renounceOwnership 放弃权限

10. renounceOwnership

Write

## 12~15 调整买入税率：销毁比例、流动性比例、营销钱包比例、分红比例

12. setBuyDeadFee 销毁税率

13. setBuyLiquidityFee 流动性税率

14. setBuyMarketingFee 营销钱包税率

15. setBuyTokenRewardsFee 分红税率

## 18~21 调整卖出税率：销毁比例、流动性比例、营销钱包比例、分红比例

18. setSellDeadFee 销毁

19. setSellLiquidityFee 流动性池 

截屏(Alt + A)

20. setSellMarketingFee 营销钱包

21. setSellTokenRewardsFee 分红

## 26 transferOwnership 转让合约权限

26. transferOwnership

newOwner (address)

newOwner (address)

Write

## 注意事项

- 1、底池必须是 BNB 资金池，不能是 USDT 资金池
- 2、不能分 BNB、wbnb 这两个币
- 3、如果卖出税率出现异常，可以尝试提高滑点多卖几笔
- 4、如果资金池撤不出来，请选择 Wbnb 撤出
- 5、资金池最好大于 1BNB
